Tools Required

- Hammer / Mallet
- Spirit Level

Sleeping Compartment

Assembly

1. Place the sleeping compartment bottom rails at each end of solid Back Panel.
2. You will see a moulding fitted to the bottom rail, please lift the back panel corner posts up and slot the groove of the post over the moulding
3. Repeat for the other side
4. Using 2 vertical posts slide them over the mouldings on the other end of the bottom rails (Please ensure vertical post is correctly position the slot covered with the trim is facing outwards)
5. Now slide the joining rail down the two vertical posts, this is what divides the sleeping area and play area. You should now have a rectangle frame.
6. Slide the smallest (in height) tongue and groove board in either side of the sleeping compartment. The top tongue and groove board has the brace bar and grooves that locate into the top of the vertical posts. This will go in last
7. Repeat for the other side.
8. Slide the Play Area Panels into the front of the sleeping compartments vertical posts. Do this for both sides.
9. Join the front play area panel (which has 2 vertical posts already connected) into place. These may be screwed for shipping purposes.

10. Finally caps can be glued on if you wish to fix them permanently. These are not glued on due to cracking caused when in transit.

NOTE: Post caps are to be glued on and left to fully bond after the pen has been fully assembled.
